

Phillip Cantu

Full-Stack Software Engineer

 thereisphil@gmail.com  [phillipcantu](#)  [hereisphil](#)  [Recommendation Letter \[Hgraph\]](#)

PROFILE

Software engineer with experience delivering production full-stack web applications using TypeScript, React, Node.js, and Postgres. Currently building with React Native and Socket.io. Army veteran and former educator bringing discipline, thoughtful problem-solving, and a focus on human craft to engineering teams. Passionate about building reliable product features, intuitive UI/UX, strong A11Y, and leveraging AI tools like Claude Code to ship clean, maintainable software with great DX.

SKILLS

JavaScript | TypeScript | React.js | Next.js | Node.js | Express.js | React Native | Python | FastAPI | Flask | CSS3 | Tailwind CSS | Responsive Design | RESTful APIs | SQL | MySQL | Postgres | SQLite | GraphQL | Supabase | Web Sockets / Socket.io | Docker | Git | GitHub | GitHub Actions (CI/CD) | Linux / Bash / Shell | Web Accessibility (A11y) | AGILE/Scrum Practices | Integration Testing | Jest | Vitest | Turborepo | JWT Auth | SSO SAML | ORMs (Prisma / Drizzle) | Clean Code | Agentic AI Workflows | Claude Code | Cursor AI IDE

EDUCATION

Bachelor of Science: Web Development, *Full Sail University*  10/2024 – Present | REMOTE
Expected graduation December 2026.

AI & Data Science, *Flatiron School*  04/2026 – Present | REMOTE
Expected graduation February 2027

Certificate: Full Stack Development with AI, *4Geeks Academy*  08/2025 – 11/2025 | REMOTE

PROFESSIONAL EXPERIENCE

Software Engineer Apprentice → Junior Software Engineer, *Hgraph*  06/2026 – 09/2026 | REMOTE

- Merged 143+ PRs across 16 different services and packages in under three months, progressing from single-component UI tickets to owning multi-service features end to end.
- Rebuilt the company's AI agent (**hgraph.ai** ) as a full-stack streaming product: SSE streaming chat backend with thread persistent store under RLS, org-scoped token/spend ceilings, and SS credential isolation so API keys never reach the browser.
- Delivered the customer-facing API usage dashboard from ClickHouse SQL through GraphQL resolvers to the React interface, adding bloom-filter skip indexes and bounded joins so tenant-scoped queries stopped scanning every granule.
- Built enterprise SAML single sign-on, an organization security boundary enforced in RLS and the GraphQL layer, JIT user provisioning, an admin provisioning endpoint, and the customer-facing setup guide, covered by 67 integration tests.

Software Engineering Apprentice, *Flatiron School*  04/2026 – 06/2026 | REMOTE

- Selected for Flatiron's paid apprenticeship; worked on a four-engineer remote team under an industry mentor, with all work delivered through pull-request review.
- Ramped on an unfamiliar production Next.js codebase, then scoped and built new features into it, owning the lesson-planner demo end to end.
- Co-built MatchPoint from scratch, an AI-powered job-matching app (React/TypeScript, FastAPI/Python, OpenAI embeddings, Supabase Postgres). Personally built the backend scaffold, Supabase auth with Google OAuth, and the core database schema and migrations across 10 merged PRs. **Site**  | **Repo** .
- Recruited away by Hgraph two months into the 14-month apprenticeship to join their engineering team.

PROJECTS

Match Point  04/2026 – 06/2026

AI-Powered Job Matching Platform | React, TypeScript, FastAPI, Python, OpenAI, Supabase Postgres

- Built an AI-driven platform that matches candidates to job descriptions by comparing semantic relevance using OpenAI text embeddings and vector similarity.
- Engineered the FastAPI/Python backend scaffold from scratch, integrating Google OAuth and session authentication via Supabase.
- Implemented front-end dashboard components in React and TypeScript, managing application state and delivering a clean, responsive UI.
- Collaborated on GitHub with peer code reviews, merging 10+ PRs across backend architecture, schema design, and API integrations.
